    Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           seminal vesicle hyperplasia in transgenic mice overexpressing B7-L compeptide. Hence modulators of (I) are useful for the treatment of cancer including seminal vesicle cancer. lung, brain, breast, ovarian, testicular cancer and cancers of haematopoietic system. B7-L polypeptide pathway can be manipulated to regulate cytotoxic T-lymphocyte response in allograft transplantation, graft versus host diseases. T-cell dependent B-cell mediated diseases and autoimmune diseases. B7-L molecules are useful for alleviating the symptoms associated with cdiseases involving chronic immune cell dysfunction or to treat autoimmune diseases such as systemic lupus erythematosus, rheumatoid carthritis, multiple sclerosis, diabetes, immune thrombocytopenic purpura and psoriasis, chronic inflammatory disease such as constant as immunosuppressive agents for bone marrow and organic Grave's disease, Hashimoto's thyroiditis and diabetes mellitus. They care also useful as immunosuppressive agents for bone marrow and organic transplantation or to prolong graft survival. B7-L molecules are also useful for diagnosis and treatment of diseases involving abnormal cell concliding arterioscilerosis and vascular restenosis.

                                                                                                 testicular cancer and cancers of haematopoietic system. B7-L polypeptide pathway can be manipulated to regulate cytotoxic T-lymphocyte response in allograft transplantation, graft versus host disease, T-cell dependent B-cell mediated diseases and autoimmune diseases. B7-L
                                                                                                                                                                                                                                                                                                                      The invention relates to an isolated B7-like (B7-L) polypeptide (I). The polypeptide, polynucleotide encoding it and antibody against (I) useful for treating B7-like polypeptide-related disease, disorders or conditions including reproductive disorders (e.g. infertility, miscarriage, preterm labour and delivery and endometriosis) and proliferating disorders.
                                                                                                                                                                              seminal vesicle hyperplasia in transgenic mice overexpressing B7-L polypeptide. Hence modulators of (I) are useful for the treatment of cancer including seminal vesicle cancer, lung, brain, breast, ovarian,
                                                                                                                                                                                                                                              proliferative disorders. Antibodies, soluble proteins comprising extracellular domains and other regulators of B7-L polypeptides are useful for enhancing the immune response to tumours. (I) plays a role growth and maintenance of cancer cells based on the observation of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New B7-like polypeptides, polynucleotides and their modulators, useful for diagnosing, preventing and treating reproductive, immune and proliferative disorders, e.g. cancer and afterlosclerosis -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human B7-like protein, B7-L_h1.
                   autoimmune diseases such as systemic lupus erythematosus, rheumatoid arthritis, multiple sclerosis, diabetes, immune thrombocytopenic
                                                             molecules are useful for alleviating the symptoms associated with diseases involving chronic immune cell dysfunction or to treat
                                                                                                                                                                                                                                                                                                                                                                                                                                                Claim 13; Fig 1; 135pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         N-PSDB; ABK13028
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     03-JAN-2002
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AAU75540 standard; Protein; 382

autoimmune diseases such as systemic lupus erythematosus, rheumatoid arthritis, multiple sclerosis, diabetes, immune thrombocytopenic purpura and psoriasis, chronic inflammatory disease such as inflammatory bowel disease (Crohn's disease and ulcerative colitis), Grave's disease, Hashimoto's thyroiditis and diabetes mellitus. They
                                                                                                                                                                                                                                                                                                       are also useful as immunosuppressive agents for bone marrow and organ transplantation or to prolong graft survival. B7-L molecules are also useful for diagnosis and treatment of diseases involving abnormal cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              seminal vesicle hyperplasia in transgenic mice overexpressing B7-L polypeptide. Hence modulators of (I) are useful for the treatment of cancer including seminal vesicle cancer, lung, brain, breast, ovarian, testicular cancer and cancers of haematopoietic system. B7-L polypeptide pathway can be manipulated to regulate cytotoxic T-lymphocyte response in allograft transplantation, graft versus host disease, T-cell dependent B-cell mediated diseases and autoimmune diseases. B7-L
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The polypeptide, polypucleotide encoding it and antibody against (i useful for treating B7-like polypeptide-related disease, disorders conditions including reproductive disorders (e.g. infertility, miscarriage, preterm labour and delivery and endometriosis) and
                                        treatment of allergy, asthma and hypersensitivity reactions, nephropathies (e.g. glomerulonephritis), skin disorders (pemphigus and pemphigoid), endocrinopathies (Grave's disease), various pneumopathies (extrinsic alveolitis), vasculopathies, coeliac disease, anaemia, thrombocytopenias, Guillain-Barre syndrome and myasthenia gravis, and lymphoproliferative disorders such as multiple myeloma. The present sequence represents the amino acid sequence of human B7-L_h2.
                                                                                                                                                                                                                         proliferation, including arteriosclerosis and vascular restenosis. Antagonists of B7-L polypeptides are useful for alleviation of toxic shock syndrome or allosensitisation due to blood transfusions, and for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                proliferative disorders. Antibodies, soluble proteins comprising extracellular domains and other regulators of B7-L polypeptides are useful for enhancing the immune response to tumours. (I) plays a role growth and maintenance of cancer cells based on the observation of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              molecules are useful for alleviating the symptoms associated with diseases involving chronic immune cell dysfunction or to treat
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim 13; Fig 2; 135pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     멍
                            The invention relates to an isolated B7-like (B7-L) polypeptide (I). The polypeptide, polynucleotide encoding it and antibody against (I) a useful for treating B7-like polypeptide-related disease, disorders or conditions including reproductive disorders (e.g. infertility, miscarriage, preterm labour and delivery and endometriosis) and proliferative disorders. Antibodies, soluble proteins comprising extracellular domains and other regulators of B7-L polypeptides are useful for enhancing the immune response to tumours. (I) plays a role growth and maintenance of cancer cells based on the observation of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human; B7-like protein; B7-L; antiinfertility; gynaecological; antitumour; cytostatic; immunosuppressive, antiarthritic; antitutemat antiinflammatory; dermatological; antipscriatic; neuroprotective; antidiabetic; haemostatic; antithyroid; antiulcer; antiallergic; antiasthmatic; nephrotropic; antibacterial; virucide; tumour; cancer; reproductive disorder; graft versus host disease; autoimmune disease; toxic shock syndrome; allergy; nephropathy; skin disorder; endocrinopathy; lymphoproliferative disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                       for diagnosing, preventing and treating reproductive, immune proliferative disorders, e.g. cancer and arteriosclerosis

They are also useful as immunosuppressive agents for bone marrow and organ transplantation or to prolong graft survival. B7-L molecules are also useful for diagnosis and treatment of diseases involving abnormal cell proliferation, including arteriosclerosis and vascular restenosis. Antagonists of B7-L polypeptides are useful for alleviation of toxic shock syndrome or allosensitisation due to blood transfusions, and for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              polypeptide. Hence modulators of (I) are useful for the treatment of cancer including seminal vesicle cancer, lung, brain, breast, ovarian, testicular cancer and cancers of haematopoietic system. B7-L polypeptide pathway can be manipulated to regulate cytotoxic T-lymphocyte response in allograft transplantation, graft versus host disease, T-cell dependent B-cell mediated diseases and autoimmune diseases.                                                                                                                                                                                                                                                         QУ
                                                                                                                                                                                                                                                                                               밁
                                                                                                                                                                                                                                                                                                                              Q
                                                                                                                                                                                                                                                                                                                                                                                                                                                polypeptide (II) sequences. (I) is useful as hybridisation probes, CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC and gene mapping, and in recombinant production of (II). The CC polynucleotides are also used in diagnostics as expressed sequence tags CC for identifying expressed genes. (I) is useful in gene therapy techniques CC to restore normal activity of (II) or to treat disease states involving CC (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating CC disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in CC diagnostics, forensics, gene mapping, identification of mutations CC responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and CC and to produce other types of fata and products dependent on DNA and CC diagnostic amino acid sequences of the invention.
                                                                                                                                                                                                                                                                                                                                                                        Matches

New B7-like polypeptides, polynucleotides and their modulators, useful for diagnosing, preventing and treating reproductive, immune and proliferative disorders, e.g. cancer and arteriosclerosis

Claim 13; Fig 5; 135pp; English.

seminal vesicle hyperplasia in transgenic mice overexpressing B7-L polypeptide. Hence modulators of (I) are useful for the treatment of cancer including seminal vesicle cancer, lung, brain, breast, ovarrian, testicular cancer and cancers of haematopoietic system. B7-L polypeptide pathway can be manipulated to regulate cytotoxic T-lymphocyte response in allograft transplantation, graft versus host disease, T-cell dependent B-cell mediated diseases and autoimmune disease. B7-L molecules are useful for alleviating the symptoms associated with diseases involving chronic immune cell dysfunction or to treat autoimmune diseases such as systemic lupus erythematosus, rheumatoid arthritis, multiple sclerosis, diabetes, imune thrombocytopenic purpura and psoriasis, chronic inflammatory disease such as inflammatory bowel disease (Crohn's disease and ulcerative colitis), Grave's disease, Hashimoto's thyroiditis and diabetes mellitus. They are also useful as immunosuppressive agents for bone marrow and organ transplantation or to prolong graft survival. B7-L molecules are also The polypeptide, polynucleotide encoding it and antibody aga useful for treating B7-like polypeptide-related disease, disconditions including reproductive disorders (e.g. infertilismissarriage, preterm labour and delivery and endometriosis) proliferation, including arteriosclerosis and vascular restenosis. Antagonists of B7-L polypeptides are useful for alleviation of toxic shock syndrome or allosensitisation due to blood transfusions, and for proliferative disorders. Antibodies, soluble proteins comprising extracellular domains and other regulators of B7-L polypeptides are useful for enhancing the immune response to tumours. (I) plays a role growth and maintenance of cancer cells based on the observation of nephropathies (e.g. treatment of allergy, asthma and hypersensitivity reactions invention relates to an isolated B7-like (B7-L) polypeptide (I). polypeptide, polynucleotide encoding it and antibody against (I) for treating B7-like polypeptide-related disease, disorders o for diagnosis and treatment of diseases involving abnormal cell glomerulonephritis), skin disorders (pemphigus and intertility or S are in

CC polypeptide. Hence modulators of (1) are useful for the treatment of cancer including seminal vesicle cancer, lung, brain, breast, ovarian, cc testicular cancer and cancers of heaematopoietic system. B7-L polypeptide cc pathway can be manipulated to regulate cytotoxic T-lymphocyte response ci nallograft transplantation, graft versus host diseases, T-cell concluding chronic immune call dysfunction or to treat cautoimmune diseases such as systemic lupus erythematosus, rheumatoid carthritis, multiple sclerosis, diabetes, immune thrombocytopenic inflammatory bowel disease (Crohn's disease and ulcerative colitis), crave's disease, Hashimoto's thyroiditis and diabetes mellitus. They care also useful as immunosuppressive agents for bone marrow and organ cransplantation or to prolong graft survival. B7-L molecules are also useful for diagnosis and treatment of disease involving abnormal cell consideration, including arteriosclerosis and vascular restenosis. Antagonists of B7-L polypeptides are useful for alleviation of toxic shock syndrome or allosensitisation due to blood transfusions, and for treatment of allergy, asthma and hypersensitivity reactions, conspirative (e.g. glomerulonephritis), skin disorders (pemphigus and conspirative disorders such as multiple myeloma. The present to sequence represents the amino acid sequence of rat B7-1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        useful for enhancing the immune response to tumours. (I) plays a regrowth and maintenance of cancer cells based on the observation of seminal vesicle hyperplasia in transgenic mice overexpressing B7-L
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The polypeptide, polynucleotide encoding it and antibody agains useful for treating B7-like polypeptide-related disease, disord conditions including reproductive disorders (e.g. infertility, miscarriage, preterm labour and delivery and endometriosis) and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New B7-like polypeptides, polynucleotides and their modulators, for diagnosing, preventing and treating reproductive, immune any proliferative disorders, e.g. cancer and arteriosclerosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                proliferative disorders. Antibodies, soluble proteins comprising extracellular domains and other regulators of B7-L polypeptides are

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Ω
The invention relates to an isolated B7-like (B7-L) polypeptide (I). The polypeptide, polynucleotide encoding it and antibody against (I) useful for treating B7-like polypeptide-related disorders or conditions including reproductive disorders (e.g. infertility, miscarriage, preterm labour and delivery and endometriosis) and
                                                                                                                              New B7-like polypeptides, polynucleotides and their modulators, of diagnosing, preventing and treating reproductive, immune and proliferative disorders, e.g. cancer and arteriosclerosis -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             antidiabetic; haemostatic; antithyroid; antiulcer; antiallergic; antiasthmatic; nephrotropic; antibacterial; virucide; tumour; cancer; reproductive disorder; graft versus host disease; autoimmune disease; toxic shock syndrome; allergy; nephropathy; skin disorder; endocrinopathy; lymphoproliferative disorder.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              proliferation, including arteriosclerosis and vascular restenosis. Antagonists of B7-L polypeptides are useful for alleviation of toxic shock syndrome or allosensitisation due to blood transfusions, and for treatment of allergy, asthma and hypersensitivity reactions, nephropathies (e.g. glomerulonephritis), skin disorders (pemphigus and pemphigoid), endocrinopathies (Grave's disease), various pneumopathies (extrinsic alveolitis), vasculopathies, coeliac disease, anaemia, thrombocytopenias, Guillain-Barre syndrome and mysthenia gravis, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   polypeptide. Hence modulators of (I) are useful for the treatment of cancer including seminal vesicle cancer, lung, brain, breast, ovarian, testicular cancer and cancers of haematopoietic system. B7-L polypeptide pathway can be manipulated to regulate cytotoxic T-lymphocyte response in allograft transplantation, graft versus host disease, T-cell dependent B-cell mediated diseases and autoimmune diseases. B7-L molecules are useful for alleviating the symptoms associated with diseases involving chronic immune cell dysfunction or to treat
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     proliferative disorders. Antibodies, soluble proteins comprising extracellular domains and other regulators of B7-L polypeptides are useful for enhancing the immune response to tumours. (I) plays a rol growth and maintenance of cancer cells based on the observation of seminal vesicle hyperplasia in transgenic mice overexpressing B7-L.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             purpura and psoriasis, chronic inflammatory disease such as inflammatory bowel disease (Crohn's disease and ulcerative colitis), Grave's disease, Hashimoto's thyroiditis and diabetes mellitus. They are also useful as immunosuppressive agents for bone marrow and organ transplantation or to prolong graft survival. B7-L molecules are also useful for diagnosis and treatment of diseases involving abnormal cell proliferation, including arteriosclerosis and vascular restensis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       lymphoproliferative disorders such as multiple myeloma. The sequence represents the amino acid sequence of mouse B7-L_m2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            arthritis, multiple sclerosis, diabetes, immune thrombocytopenic

dependent B-cell mediated diseases and autoimmune diseases. B7-L molecules are useful for alleviating the symptoms associated with diseases involving chronic immune cell dysfunction or to treat autoimmune diseases such as systemic lupus erythematosus, rheumatoid arthritis, multiple sclerosis, diabetes, immune thrombocytopenic purpura and psoriasis, chronic inflammatory disease such as inflammatory bowel disease (Crohn's disease and ulcerative colitis).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             seminal vesicle hyperplasia in transgenic mice overexpressing B7-L polypeptide. Hence modulators of (I) are useful for the treatment of cancer including seminal vesicle cancer, lung, brain, breast, ovarian, testicular cancer and cancers of haematopoietic system. B7-L polypeptide pathway can be manipulated to regulate cytotoxic T-lymphocyte response in allograft transplantation, graft versus host disease, T-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to an isolated B7-like (B7-L) polypeptide (I). The polypeptide, polynucleotide encoding it and antibody against (I) useful for treating B7-like polypeptide-related disease, disorders or conditions including reproductive disorders (e.g. infertility, miscarriage, preterm labour and delivery and endometriosis) and proliferative disorders. Antibodies, soluble proteins comprising extracellular domains and other regulators of B7-L polypeptides are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Mouse: B7-like protein: B7-L; antiinfertility; gynaecological; antitumour; cytostatic; immunosuppressive; antiarthritic; antirhe; antiinflammatory; dermatological; antipsoriatic; neuroprotective; antidiabetic; haemostatic; antithyroid; antiulcer; antiallergic;
                                                                                      treatment of allergy, asthma and hypersensitivity reactions, nephropathies (e.g. glomerulonephritis), skin disorders (pemphigus and pemphigoid), endocrinopathies (cave's disease), various pneumopathies (extrinsic alveolitis), vasculopathies, coeliac disease, anaemia,
                                                                                                                                                                                     useful for diagnosis and treatment of diseases involving abnormal cell proliferation, including arteriosclerosis and vascular restenosis. Antagonists of B7-L polypeptides are useful for alleviation of toxic shock syndrome or allosensitisation due to blood transfusions, and for
                                                                                                                                                                                                                                                                                           are also useful as immunosuppressive agents for bone marrow and organ transplantation or to prolong graft survival. B7-L molecules are also
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  useful for enhancing the immune response to tumours. (I) plays a regrowth and maintenance of cancer cells based on the observation of

The materials of the invention, including adsorbents, are for extracorporeal circulation, which are applicable in the selective elimination of diabetic complication factors from a body fluid, and are therefore useful in treating vascular lesions like arteriosclerosis due to carbonyl stress products caused by abnormally promoted carbonyl stress from excretory dysfunction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    27-AUG-2002 (first entry)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            390

The method comprises administering an inhibitor of receptor for advanced glycation/glycosylation end product (RAGE), so as to inhibit new tissue growth or neointimal formation in subject's blood vessels and preventing restenosis in the subject. The method is useful for inhibiting new tissue growth or neointimal formation in blood vessels in a subject that the subject is a subject to the subject that the subject is a subject to the subject that the subject is a subject that has subject that the subject is a subject that has experienced blood vessels in a subject t
                                                                                                 Human receptor for advanced glycosylation end product (RAGE).
                                                                                                                                                                             05-JUN-2002
                                                                                                                                                                                                                                            AAU77543;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                like non-human animal, a transgenic non-human animal or a human suffering from diabetes, acute thrombotic stroke, venous thrombosis, unstable angina, myocardial infarction, abrupt closure following angioplasty or stent placement, or thrombosis as a result of peripheral vascular surgery. The method is also useful for preventing restenosis and for determining whether a compound inhibits new tissue growth in a blood vessel in a subject. The present sequence is human receptor for advanced glycosylation end product (RAGE) protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Inhibiting new tissue growth or neointimal formation in blood vessels of subject suffering from diabetes, stroke and preventing restenosis, comprises administering inhibitor of receptor for advance glycation en
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence

(I) inhibits transcytosis of amyloid beta peptides across blood-brain barrier, thus decreasing cerebral vasoconstriction and increasing cerebral blood flow. (I) is useful for treating amyloid angiopathy in a subject, decreasing cerebral vasoconstriction in a transgenic non-human animal (preferably, transgenic mouse overexpressing mutant human amyloid beta precursor protein) or a human, suffering from chronic or acute cerebral amyloid angiopathy, preferably, Alzheimer's disease, and for ameliorating heurovascular stress comprising cerebral amyloid angiopathy in a subject, where the neurovascular stress is caused by Alzheimer's disease, aging, Down's syndrome, head trauma or stroke. This is the

                                                                                                                                                                                                                                                                            The invention relates to detecting receptor for advanced glycated endproducts (RAGE) modulators comprises determining the amount of RAGE protein or its fragment bound to the pre-adsorbed ligand by measuring the amount of anti-RAGE antibody bound to the solid surface. The method is useful for rapid, high-throughput identification of compounds that modulate RAGE. The compounds are useful for treating symptoms of diabetic late complications, amyloidoses, Alzheimer's disease, cancer, inflammation, kidney failure, systemic lupus nephritis or inflammatory lupus nephritis, erectile dysfunction and

            This polypeptide comprises a portion of a new human melanoma associated antigen, designated MG50. The amino acid sequence was deduced from a cDNA clone (see AAV9922) isolated from melanoma cell line MSM M-1 cDNA by subtractive hybridisation. The 5' region of MG50 cDNA was not obtained. MG50 mRNA has been detected in melanoma, lung carcinoma and rhabdomyosarcoma cells, foetal brain, foetal heart and human placenta. The invention also provides T cell epitopes (see AAW81031-54) from MG50, including cytotoxic and celle pitopes, antibodies that specifically bind to MG50 ran MG50 T cell epitope, recombinant vectors, and antigen melanoma associated antigen in an individual and for identifying an melanoma associated antigen in an individual and for identifying an entined in the models of stimulating T lymphocytes that are reactive melanoma associated antigen as methods of stimulating T lymphocytes that are reactive argainst an MG50 and for treating as individual and for identifying and the models of stimulating T lymphocytes that are reactive argainst an MG50 and for treating as individual and for identifying and the models of stimulating T lymphocytes that are reactive argainst an MG50 and for treating as individual and for identifying and models are models as methods of stimulating T lymphocytes that are reactive argainst an MG50 and for treating as individual and for identifying and models are methods of stimulating T lymphocytes that are reactive.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          δÃ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    밁

This sequence is the human homologue (hPxn) of CC Drosophila peroxidasin gene dPxn, that is expressed in heart, placenta, CC spleen, ovary and intestines. PRG2 is involved in p53-mediated growth CC suppression pathways and plays a role in redox regulation. It is a CC tharm peroxidase that increases the intracellular content of reactive CC oxygen species (ROS). They are potential targets of p53 regulatory CC exitivity and are useful for modulation of cellular proliferation. PRG2 Gene is localised to human chromosome 2p24.3. The PRG target molecules CC proteins and antibodies are useful as diagnostic and therapeutic agents CC for detection and treatment of cancer and other proliferative diseases. CC the gene/cDNA may be used for gene therapy, to restore a gene function CC downstream of p53, that cannot be activated in the p53-deficient tumour CC cell. Antibodies can be used as inducers of cell cycle arrest and/or CC as a model of cancer susceptibility.
